EDUCATION

The University of Texas at Austin

B.S. in Computer Science

– **Relevant Coursework:** OOP, Data Structures, Computer Architecture, Operating Systems

Expected May 2028

Austin, TX

EXPERIENCE

Goldman Sachs

Software Engineering Intern

Jun 2026 – Aug 2026

Dallas, TX

- Engineered a **distributed backend platform** supporting **\$70B+ in collateral**, transitioning 4 Java/Spring Boot services, 40+ REST APIs, and 3 databases from **Kubernetes** to AWS ECS with Docker and AWS CDK.
- **Redesigned data architecture** across Aurora, DocumentDB, and DuckDB, separating transactional and analytical workloads to cut analytical compute by **89%** and infrastructure costs by **79%**.
- Built an **incremental data synchronization pipeline** for collateral data from MongoDB and SingleStore into Aurora, adding schema validation, checkpoints, and audit logging to support reliable production cutover.

CharityStack (Startup)

Software Engineer

Sep 2025 – Apr 2026

Austin, TX

- Engineered serverless payment infrastructure supporting **\$50M+** in donations, building **Go** services on **Google Cloud Functions with Pub/Sub** for reliable event-driven processing.
- Led development of a native iOS application for in-person donation processing using **Swift and SwiftUI** with Stripe Terminal, implementing secure card-present payment flows and streamlining on-site fundraising operations.

An-Nisa Hope Center

Software Engineering Intern

May 2025 – Aug 2025

Houston, TX

- Built production web applications using TypeScript, **Angular**, and **PostgreSQL** for food pantry operations, education programs, payments, volunteer coordination, and grant reporting, reducing manual work by **50%**.
- Built an AI assistant serving **3,000+ monthly visitors**, using Python, Retrieval-Augmented Generation (**RAG**), and **Vertex AI Vector Search** for semantic and keyword retrieval over organization-specific content.

PROJECTS

HelmPM (helmpm.app) — *FastAPI, React, gRPC, PostgreSQL, Google ADK*

- Built a **multi-tenant AI-native project management platform** serving **5 product teams and thousands of tickets**, unifying sprints, docs, tickets, meetings, and workflows via Python/FastAPI services over **gRPC** with Protocol Buffers, backed by PostgreSQL and Redis.
- Built Helm's **retrieval and RAG layer** for its AI copilot, searching code, docs, meetings, and tickets with dense and BM25 retrieval, fusing results with Reciprocal Rank Fusion and **cross-encoder reranking** before grounding responses; added incremental indexing and evaluation using Recall@K and NDCG.
- Architected Helm's **AI agent system** using **Google ADK and MCP**, coordinating planning, retrieval, and execution agents across **35+ tools** to answer workspace questions, create and update project artifacts, and execute workflows through GitHub, Slack, Meetings, and Notion, with ADK evals for task and tool-use accuracy.

UT Student Living — *Flutter, Node.js, Firestore, Google Maps*

- Built and shipped a **cross-platform roommate-management app** to the **Apple App Store** using Flutter and Dart, with a Node.js backend and Firestore powering shared expenses, chores, events, and marketplace workflows.
- Engineered **real-time roommate coordination** for live location, messaging, and group voting using WebSockets, with Google Maps Platform and geocoding/routing services powering nearby-place discovery and navigation.

InReach AI — *Flask, Angular, Gmail API*

- Built and deployed an **AI-powered outreach platform used by 2,000+ users**, turning resumes and roles into contact searches, personalized outreach, and email delivery through Apollo.io and the Gmail API with OAuth.

SKILLS

Languages: Java, Python, Go, C++, TypeScript, JavaScript, Dart, Swift, SQL

Frameworks & Systems: Spring Boot, FastAPI, Node.js, React, Angular, Flutter, Linux, gRPC, WebSockets

Cloud & Data: GCP, AWS, Docker, Kubernetes, PostgreSQL, Redis, Firestore, MongoDB

AI: Google ADK, Vertex AI, MCP, RAG, Claude Code, Codex, Cursor
